Delkin Devices, Inc. today announced its first shipments of the new CardBus 32 UDMA CompactFlash adapter to camera stores, distributors and international channels. The CardBus 32 UDMA adapter is designed to transfer images to a computer using UDMA (Ultra Direct Memory Access) enabled CF memory cards at over 45 MB/s. The pairing of CardBus and UDMA technologies allows the fastest data transfer from UDMA CF memory cards to Apple and PC laptops with CardBus slots.

“Successive waves of the latest Digital SLRs produce ever-increasing file sizes, which typically result in slower image transfers,” said Eric Richter, Delkin’s Marketing Manager. “That’s unacceptable to digital photographers who work with laptops as a critical part of their workflow process.”

With UDMA CompactFlash cards already available in the market, photographers with Delkin’s new CardBus adapter have the fastest and easiest way to transfer images from their memory card to their computer. No other card reader available in the market comes close to competing with the transfer speeds achieved by the CardBus 32 UDMA adapter.

The CardBus UDMA adapter greatly improves the efficiency of a photographer’s workflow with transfer speeds over 45 MB/s. These ultra-fast speeds are achieved when using UDMA enabled CF cards. Delkin’s website has drivers available for Windows Vista/XP/2000/ME/98/98 SE and Mac OS X 10.4+. The CardBus UDMA sells at an MSRP of \$59.99 (Part number DDCFCARDBUS2-AD). For more information, go to <http://www.delkin.com/products/adapters/cardbusudma/> on the Delkin website.

Delkin Devices, has long been the first in connectivity products by offering the widest variety of PCMCIA adapters in the industry, introduced the innovative CardBus adapter to the USA market over three years ago. Now both the digital photography and the computer market are poised to move towards UDMA technology. Once again, Delkin stays ahead of the technology curve, this time by providing an adapter solution for photographers who demand the fastest means to transfer their digital images into a computer.

Delkin Devices, Inc. is based in Poway, California, and its European branch office is located in Birmingham, England. Delkin has been providing “Everything but the Camera” since 1986. From Archival Gold Media and SensorScope cleaning products to Pop-Up Shades, Delkin products deliver premium quality, innovative designs and an ongoing dedication to superior customer service. Delkin Devices and its products have become worldwide industry leaders in both OEM and consumer markets. Delkin branded memory cards continue to be a leading choice among professional photographers and others passionate about digital photography. Delkin Devices’ innovative digital photography products are available worldwide through a network of independent camera stores, and online at Delkin Devices’ website: www.delkin.com.
