Poway, CA. December 3, 2007 - Delkin Devices, Inc. today expanded the outer limits of CompactFlash card storage capacity and speed for digital cameras by announcing its 16GB UDMA enabled CompactFlash PRO card. This latest addition to Delkin's CompactFlash PRO line boosts screaming fast read/write speeds—up to 305x (45MB/sec sustained transfer speed capability). Now photographers using UDMA enabled cameras such as the Canon 1Ds Mark III, Nikon D300 and Nikon D3X have a memory card that can maximize the full benefits of their camera investment.

“Delkin confirms its commitment to continuing leadership in speed, capacity and reliability of memory cards with this new expansion to our PRO memory card line,” said Eric Richter, Delkin's Marketing Manager. “What's more, Delkin's complete UDMA solution for professional photographers is unmatched by any other manufacturer. Besides our CompactFlash PRO cards, we offer UDMA enabled ExpressCard and CardBus adapters, and a FireWire reader for the fastest download speeds to the computer. That's critical for such working pros as news, sports, and wedding photographers, but any photographer working with larger RAW files will benefit.”

Photographers without UDMA enabled digital cameras and camera backs can apply the technology's benefits to their workflow process right away. The enhanced card-to-computer transfer times are striking. Delkin's UDMA CompactFlash Pro cards, when used with the company's UDMA enabled FireWire reader and adapters, dramatically reduce the time needed to download digital image files to a computer. The difference may be crucial for those working in the field with battery operated laptops.

Delkin's PRO memory card line combines high speed and high capacity with reliability. This is accomplished by using high grade SLC NAND flash products, advanced controller design, and quality control guidelines based on ISO:9001 standards. The company has supported Lifetime warranties on its memory products for over 20 years, while maintaining its place at the cutting edge of performance. The MSRP for the 16GB card is \$399.99. Delkin's PRO line of memory cards and other innovative digital camera accessories may be found in camera stores and distributors worldwide, as well as the company's website at [www.delkin.com](http://www.delkin.com).

Delkin Devices, Inc. is based in Poway, California, and its European branch office is located in Birmingham, England. Delkin has been “Making Photography Better” since 1986. From SensorScope cleaning products and Archival Gold Media to Pop-Up Shades, Delkin products deliver premium quality, innovative designs and an ongoing dedication to superior customer service. Delkin Devices and its products have become worldwide industry leaders in both OEM and consumer markets. Delkin branded memory cards continue to be a leading choice among professional photographers and others passionate about digital photography.
